**Medical Simulation Corporation and CardioSkills[©] Company
Announce the Opening of a SimSuite[®]**

DENVER, Jan. 8 /PRNewswire/ — Medical Simulation Corporation (MSC) announces the opening of a SimSuite center in Germany. MSC has entered into an agreement with CardioSkills Company, headquartered in Frankfurt, Germany. MSC and the CardioSkills team have partnered to provide an interventional skills training experience for physicians and their staff through the use of simulation education. Training experiences range from basic to complex procedures.

“MSC and CardioSkills – that’s professionalism meeting professionalism and the result is a new definition of quality and a new standard in medical education and simulation,” said Dr. Erhard Kaiser, Founder of CardioSkills.

“Our objective in Europe is to serve the medical community with superior training and to partner with societies in studies of simulation while maintaining the integrity of our education approach,” said Bill Younkes, MSC Chief Executive Officer and President. “Our partnership with CardioSkills represents a significant milestone in MSC’s global expansion efforts.”

The CardioSkills SimSuite is the second SimSuite that MSC has opened in Europe, with the first located at the Flanders Medical Research Program headquartered in Dendermonde, Belgium (www.fmrp.be).

In addition to dedicated SimSuites, MSC also has the capability to deploy the SimSuite to customer sites or congresses. MSC's mobile distribution capability includes the onsite presence of the simulation system, courseware and clinical specialist support. Societies, manufacturers, hospitals and provider teams experience a high-quality training event. Unlike other simulation training programs, there is no need to purchase expensive equipment that quickly becomes obsolete, develop courseware or have trainers on staff. MSC partners with its customers to provide education services, develop courseware and distribute education. This model has proven to be a safe and cost-effective alternative to traditional training programs.

About MSC: Medical Simulation Corporation is an education services company that provides medical product and clinical procedure training as well as education services to medical product manufacturers, medical societies, and hospital personnel including clinical specialists and sales representatives, physicians, nurses, and technicians. Through its network of training platforms, MSC can provide customized training services to any location to serve customers, clinical staff and employees. For more information, please visit www.medsimulation.com or call 888-889-5882.

About CardioSkills: CardioSkills is an independent and highly specialized training institution for healthcare professionals involved in the field of endovascular medicine. CardioSkills offers state-of-the-art simulator training to update professional skills in addition to the traditional clinical educational programs. CardioSkills' specialty is Team Training and Human Factors Training, for which a Boeing 737 Cockpit simulator is provided in the CardioSkills Simulation Center. The CardioSkills team consists of more than 30 trainers including Interventional Cardiologists, Interventional Radiologists, Anesthesiologists, Vascular Surgeons, Psychologists, Behavioral Trainers, Pilots, Medical Technicians and Medical Students from different German Universities.
